

Zürich Canton Building Defence (GVZ), Switzerland

The Project:

Efficient vacuum removal of hydrocarbons on water surfaces by the chemical and oil spillage task force of Zurich Canton

Contractor:

Zurich Canton Building Defence (GVZ)

The Problem:

The use of conventional skimmers/surface suction devices is relatively complex as a suction pump has to be installed in addition. Furthermore, after installation, two devices have to be overhauled. Alternatives have been sought in order to make the application more efficient.

The Solution:

The Tsurumi FSP scum skimmer/surface suction device with three floats provides an elegant solution for this problem. The integrated pump makes stand-by operation and maintenance much easier and reduces time spent. The Zurich Canton Building Defence (GVZ) has equipped itself with type 8-FSP for use in the event of an incident.
